Equity stock markets

Summary

Understanding Equity Markets

Equity markets are the meeting point for buyers and sellers of stocks. The securities traded in the equity market can be either being public stocks, which are those, listed on the stock exchange, or privately traded stocks. Often, private stocks are traded through dealers, which is the definition of an over-the-counter market.

Trading in an Equity Market

In the equity market, investors bid for stocks by offering a certain price, and sellers ask for a specific price. When these two prices match, a sale occurs. Often, there are many investors bidding on the same stock. When this occurs, the first investor to place the bid is the first to get the stock. When a buyer will pay any price for the stock, he or she is buying at market value; similarly, when a seller will take any price for the stock, he or she is selling at market value.

Companies sell stocks in order to get capital to grow their businesses. When a company offers stocks on the market, it means the company is publicly traded, and each stock represents a piece of ownership. These appeals to investors, and when a company does well, its investors are rewarded as the value of their stocks rise. The risk comes when a company is not doing well, and its stock value may fall. Stocks can be bought and sold easily and quickly, and the activity surrounding a certain stock impacts its value. For example, when there is high demand to invest in the company, the price of the stock tends to rise, and when many investors want to sell their stocks, the value goes down.

Stock Exchanges

The place where stocks in the equity market are traded is the stock exchange. There are many stock exchanges around the world, and they can be either physical places or virtual gathering spots. NASDAQ is an example of a virtual trading post, in which stocks are traded electronically through a network of computers. Electronic stock exchanges often include a market maker, which is a broker-dealer company that both buys and sells stocks in order to facilitate trading for a particular stock. This comes at a risk to the company, but it makes the exchange process for a given stock operate smoothly. Electronic trading posts are becoming more common and a preferred method of trading over physical exchanges.

The New York Stock Exchange (NYSE) on Wall Street is a famous example of a physical stock exchange; however, there is also the option to trade in online exchanges from that location, so it is technically a hybrid market. In a physical exchange, orders are made in open outcry format, which is reminiscent of depictions of Wall Street in the movies: traders shout and display hand signals across the floor in order to place trades.
